Authorization for this examiner's amendment was given in a telephone interview with Mr. Connor on April 15, 2005.

2. The application has been amended as follows:

In claim 6, renumbered for issue as claim 9, on line 3, after "alumina hydrate", -- obtained through a quenching step and-- has been added; after "boehmite structure", -- and a flat plate form-- has been added; on line 4, "2.0 to 6.0" has been replaced with -- 3.0 to 5.0--; on line 5, after "plane,", --the crystallite size in the direction of the (020) plane being greater than the average particle thickness by at least 1 nm,-- has been added; on line 7, "mixture." has been changed to --mixture, wherein the recording medium has a degree of parallelization of 30 to 1,000.--

3. The following is an examiner's statement of reasons for allowance: While the prior art discloses a range for parallelization degree of greater than 1.5 with specific examples in a range of 2.1 to 3.5, there is no recognition in the prior art of the criticality of parallelization degree values of over 30. This criticality is demonstrated in Table 1 of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
